FROM THE SOUTH PACIFIC TO SIBERIA

YOU CAN FIND A WORLD CAT CATAMARAN VIRTUALLY ANYWHERE.

For a quarter of a century we've pioneered A Better Way to Boat™. Today, World Cat is the largest maker of power catamarans in the world. Located in Greenville, NC, our boats are precision-crafted in our state-of-the-art facilities.

Thousands of customers across the globe can be found enjoying the quality and comfort of a World Cat. From the Great Lakes to the Gulf Coast, from entertaining at the dock to navigating the deepest waters, you'll find World Cat boats delivering a better boating experience. From dual console to center console, and sun deck models, there's a World Cat that's right for you.

WHY DO BOATERS CHOOSE WORLD CAT?

QUITE SIMPLY, WE OFFER A BETTER WAY TO BOAT™.

If you're a boater, you know about the pounding, slapping, exhausting ride of a monohull boat. At World Cat, we create boats that put an end to all of that abuse. By bringing you the smoothest, most stable ride possible, we make boating better for you, your family, and friends. With a World Cat, you can spend more time on the water, venture out in conditions that would keep most boats secured at the dock, go greater distances, and come back with more energy and fewer bruises.

You get all of that comfort without sacrificing power or performance. Our complete World Cat line gives you more ways to cruise, fish, dive, and explore the water world around you.

A SMOOTHER RIDE

IS ONLY THE BEGINNING

ADVANTAGES OF A WORLD CAT

TWO HULLS ARE BETTER THAN ONE

When it comes to delivering a better boating experience, a World Cat boat beats a monohull two to one. That's because the catamaran design of a World Cat helps to eliminate the pounding, slapping, and jarring you get from running a monohull boat. Instead, you get a smoother, gentler, more stable ride in virtually any condition.

That means you can enjoy being out on the water longer, going farther, and coming back without the bumps, bruises and physical exhaustion you get with a monohull. But, that's just the beginning.

Consider some of the key advantages of owning a World Cat:

- A soft ride with high-speed performance
- More stability at rest
- Greater handling in all kinds of seas
- Shallower draft for traveling in 'skinny' waters
- Greater load bearing capabilities
- More usable deck space
- The ability to fish off the side without listing
- Superior get-home capability
- Easier docking and maneuverability
- Greater fuel economy
- Higher resale value

WORLD CAT PLANING HULLS

DESIGNED TO DELIVER SMOOTHNESS, STABILITY, AND SPEED

If you're looking for speed, you'll find it with this design. By employing a flatter V-bottom surface, you get on plane quicker for maximum speed.

This design delivers race car-like performance. And, while traditional monohull boats slam you hard when coming down, this action is greatly reduced in a World Cat power catamaran. Which means less abuse and more control for you.

VECTORFLO®

THE SCIENCE BEHIND THE SMOOTHER RIDE

HOW IT WORKS

Our unique VectorFlo® hull design is the key to World Cat's smoother, softer, faster, and drier ride. This engineering innovation combines air and water at the scoop-shaped bow and channels the mixture into the tunnel between the twin hulls. A Vector Pod, forward in the hull, helps to break up incoming water, creating aeration and reducing friction. As the mixture passes through the narrowing tunnel channel, it increases velocity, while decreasing forward pressure and drawing the aerated water and spray aft through the tunnel.

- Air enters the tunnel
- Water enters the tunnel
- Aerated mixture
- Compressed aerated mixture accelerates through tunnel

- The rapidly moving aerated mixture forms a water-cushioned suspension between the hulls and beneath the boat's tunnel.
- You get a softer ride, improved stability, and enhanced fuel efficiency.
- Because the aeration increases in rough seas, the cushioning effect becomes more evident the worse conditions get.

BUILDING A BETTER WAY TO BOAT™

MANUFACTURING EXCELLENCE

All of our boats are built in our state-of-the-art facilities in Tarboro and Greenville, North Carolina. Here's a brief overview of how the smoothest riding boats in the world are built, a process that requires many steps from idea to water.

This complex process, only briefly described here, is a combination of the latest technology matched to the experience and skill of some of the best engineers and craftsmen in the industry. While our boats reflect only the highest quality, we are constantly seeking out and finding new ways to drive our quality even higher.

DESIGN

START WITH THE BEST DESIGN

- When designing our hulls, we not only take into account the hydrodynamics of hull shape, but the friction-reducing VectorFlo® tunnel shape, and the precise shape and size of planing surfaces— all while balancing weight and strength for optimal performance.
- For structural integrity and precise fit, hulls and decks are designed using the most sophisticated CAD/CAM 3D modeling software (which was also used to develop the Mars Rover).
- Once a design is near completion, a full-scale mock-up is built so that user ergonomics can be evaluated and final adjustments made.
- When the design is finalized and signed off, every part is computer modeled and then precision tooled.

MATERIALS

GIVE IT SHAPE AND FORM USING THE BEST MATERIALS

- We use only the highest quality materials, which need to balance weight, strength and durability.
- To create a beautiful, smooth, durable hull exterior we use the highest quality gel coat and apply a 100% vinylester barrier coat to the mold. The gel coat provides a beautiful surface that will last for years, and the barrier coat protects against any blistering.
- Bi-directional and tri-directional knitted fiberglass cloth is applied onto the mold by hand to assure a stronger, more durable laminate.
- We fabricate structural bulkheads and stringers from high-density composite materials impervious to water absorption and rot.
- For enhanced flotation, sound and thermal insulation, strategic cavities are filled with foam after the stringers and bulkheads are glassed into the hull.
- Our hardware is fabricated from 316 marine-grade stainless steel to better withstand the saltwater environment.

PROCESS

EMPLOY THE BEST CRAFTSMEN IN THE BUSINESS

- Veteran craftsmen, many with more than two decades of experience, work to transform ideas and materials into the smoothest riding boats on water.
- We hand-polish each mold to a high-gloss before applying the exterior gelcoat.
- A specially calibrated mix of fiberglass and resin is strategically laid into the molds in layers, interspersed with careful hand-rolling of the surfaces to expel any excess air and to ensure a solid bond.
- Once the hull is removed from its mold, craftsmen begin installing through-hulls, rod holders, seats, heads, windshields, and all the other elements of a World Cat boat.
- Polyethylene fuel cells, bilge pumps, plumbing, electrical, and other key systems are tested and installed, and the hull and deck are securely bonded together.
- Heavy-duty and oversized welded aluminum frames secure fiberglass hardtops and T-tops as the boat takes its final shape.
- Engines and connections are then installed and tested at the factory.
- Finally, before leaving the factory, each boat is given a detailed, thorough inspection, making sure that not only are all components properly installed and operational, but that the fit and finish are flawless.

DECADES OF *Excellence*

1998

The first World Cat is built in Greenville, NC with a new mold and new hull. By fall of 1998, the World Cat brand is launched with three models: the 246 Sport Fisherman (SF), 266 Sport Cuddy (SC), and 266 Sport Fisherman (SF).

2001

- The acquisition and renovation of a new facility is the start of transitioning production to Tarboro, NC.
- Chris Peters sets the World Record Maco Shark in a 246SF.

2004

World Cat introduces a truly complex and innovative design with the 320EC, featuring World Cat's first hull with a cabin and separate head.

2010

World Cat launches its first family fish friendly hull and deck design with the new 320CC Center Console.

2016

World Cat launches the largest dual console outboard boat on the market with the 320DC.

2017

The 280CC-X and 280DC-X is launched, featuring a new hull style line, designed to deliver a refined look at top speeds.

2022

World Cat celebrates their 25th Anniversary year and introduces the all new 260CC-X.

2000

2000

- The 246DC Dual Console launches.
- A World Cat wins the Bermuda Challenge - a run from Norfolk, VA to Bermuda.

2002

World Cat launches the 33' TE Center Console, an innovative performance boat. At the time, it was the largest outboard boat in production and the first outboard boat to feature the new Suzuki 300HP 4-stroke engines, an absolute game changer.

2005

2009

World Cat secures its staying power by acquiring Glacier Bay and Livingston Catamaran Boats, while reinforcing its commitment to A Better Way To Boat™.

2010

2011

World Cat officially enters the inshore audience with the launch of the 230CC and 230DC.

2015

For the first time, World Cat launches a boat that does not focus on fishing first with the 230SD, featuring a refined family and cruising boating experience.

2017

2019

The new flagship 40' hull emerges with the launch of the 400DC-X, becoming the largest dual console catamaran to ever hit the market. Quickly following was the 400CC-X Center Console featuring the innovative Cat-Track™ seating.

2023

2023

Release of the all-new 260DC-X, the successor to the 255DC.

Why Choose a Catamaran?

2 HULLS ARE **BETTER** THAN 1

Smoothness. Stability. Speed.

World Cat hulls are designed to deliver all of them.

SMOOTHNESS

The efficient hull design reduces resistance and allows for faster headway, especially in rough conditions.

LOAD DISTRIBUTION

The catamaran's rectangular shape uses space much more efficiently, giving passengers room to stretch out and enjoy the ride.

STABILITY

Catamarans' parallel hulls create reliable form stability, which prevents heeling and capsizing, and greatly reduces the vessel roll at rest and at trolling speeds.

A FEW Testimonials

280CC-X | GUILIA A.

I've been driving monohauls since I was 10 years old. This is the first cat I've ever driven and I'll never go back! It blows my (previous) 32 ft Intrepid out of the water! I run the boat in the rough seas surrounding the Turks and Caicos Islands and the boat quite literally gallops over any wave... at the same time, it can get into shallow waters with ease and is perfect for beaching it on deserted islands. Well done, World Cat!

230DC | THE TRINH FAMILY

It has been 4 months now since we bought our World Cat 230DC. During those 4 months we have been on the water more times than we have the previous 3 boats we owned combined. This is during the winter season!! We expect to be on the water even more often as the weather warms up. Thank you World Cat for making a boat that has allowed me to take my family offshore on calm days and to fish inshore when it is not. The 230DC is truly a versatile boat with its haul design and low draft. The stability and fuel efficiency of the boat has allowed me and my family to spend much more time on the water without hurting the pocket book too bad in fuel expense.

295DC | STEVE FROM WHISPERING PINES, NC

The Dual Console is extremely family-friendly for cruising and the large open rear cockpit area has plenty of space for divers and hardcore fishing. We chose the 295DC because we also needed to be able to trailer the boat for trips out of state and have trailered over 3,000 miles in our first year of ownership. Our World Cat has enabled our family to spend quality time on the water in our own boat from North Carolina to Florida to the Bahamas.

320CC | ERUANI FROM MIAMI, FL

Impressive and superior ride. Crossing over on waves was perfect and smooth. It is a must buy!

280DC-X | ALGEN FROM ORANGE PARK, FL

I was in the market for a modern family boat that could do it all, fish the flats, run off shore, provide a stable smooth ride, cut through the chop and wakes and look good while doing it. Unbelievably the 280DC-X ticked all of the boxes.

320CC | MATTIAS FROM SWEDEN

Interesting experience, surprised by the smoothness of the ride. Great performance and maneuverability!
